- Plywood
- Wood veneer
- Solid surface

Optional power/data cut-outs are available factory installed; upcharge applies. Power centers are specified separately.

Mid-leg on 120” and 140”W conference table frames provides additional support. Cable management channel is built into the leg to route cords and cables beneath the surface to the floor.

4 legs styles:
- Square (metal legs)
- Round (metal legs)
- D legs (metal or wood legs)
- Angled D legs (metal or wood legs)
Mobile work carts are 541/8"H. The basic cart is standard with the frame, back panel, and casters. Worksurfaces are specified separately, as are storage and end panel components. Carts ship knocked down.

Back panels, which ship standard with the mobile work cart, are available in TFL, markerboard, or wood veneer, and can be specified with or without an accessory rail and/or tackable felt. Markerboard back panels are writable on both sides of the unit.

Adjustable-height cart features a pneumatic base to raise and lower the worksurface; no power required. Worksurface adjusts from 287/8" to 443/8". The base supports up to 15 lbs. in addition to the worksurface.

Worksurfaces, specified separately, are available in:
- 3/4"-thick thermally-fused laminate (TFL) with vinyl or ply rim
- 3/4"-thick high-pressure laminate (HPL) with vinyl or ply rim
- 3/4"-thick plywood with exposed plywood edge (up to 96"W)
- 3/4"-thick wood veneer with a wood rim

Note: Plywood tops are 3/4" plywood with an exposed edge. Rotary wood grain patterns on tops will vary from one top to another. Small voids may be visible in the edge, which is an inherent characteristic of plywood.

Storage cabinets can be added to either end or both ends of a mobile work cart in the field. They are available in open-shelf, hinged door, and slide-out storage configurations and in TFL or wood veneer. Storage cabinets are handed and include two casters. ➤See markerboard and tackable felt options at right.

Cubbies can be added as set-on-surface or undermount storage. These cubbies are perfect for holding power packs or other small devices.

Note: Undermount cubbies are for use on adjustable-height work cart surfaces only. They cannot be used on static worksurface models due to an undersurface support rail which prevents attachment.

End panels can be added to either end or both ends of a mobile work cart in the field. They are non-handed and available in TFL or wood veneer. ➤See markerboard and tackable felt options at right.

IMPORTANT: Storage cabinets and end panels can be added or removed in the field at anytime allowing for the expansion or reconfiguration of the mobile workspace when needed.

Crave® PowerPack 2 is available through third-party vendors for use in Kore set-on-surface and undermount cubbies. ➤www.cravedirect.com

Cubbies are sized to accommodate the Crave PowerPack model specifically; however other power packs may also fit; size should be verified. ➤See page 7.69 for interior dimensions of cubbies.

Overview

Mobile Carts 

Mobile carts are 75"H and can provide space division or create impromptu gathering spaces. Select from:

- Screen cart
- Screen cart with storage
- Wardrobe cart
- Magnetic markerboard cart
- Media cart
- Cart with seat

Media cart can have monitor (up to 30 lbs.) mounted on one side. Reverse side features a markerboard surface. Select sliding-door or open storage below.

Tri-pod divider screen cart is available in fabric or translucent/white fabric.

Note: Translucent/white screen material is a PVDF (polyvinylidene fluoride) fabric. It allows 80% light transmission with minimal color shift. It is permanently UV resistant and colorfast, and dirt and water repellent. The textile structure and its feel are state of the art; slight variations in the appearance of the fabric are due to small differences in raw materials.

Utility carts can be used as returns in benching applications or provide a mobile workspace. Worksurface is 28½"H. Units are standard with one white Salt USB center and one white Pepper power center.

Multi-purpose tables are available with optional cut-outs inset into the center storage area below the surface. These cut-outs accommodate a Salt USB and/or Pepper power centers, two facing outward on each side (four total); specified separately for field installation.
KORE™ tops are available in:

- 3/4"-thick thermally-fused laminate (TFL) with vinyl or ply rim

**Grain direction on one-piece wood tops** runs with the width in all veneers and finishes. Also applies to plywood tops.

**Grain direction on two-piece wood tops** runs with the width in all veneers and finishes. Also applies to plywood tops.

**Grain direction on one- and two-piece woodgrain laminate tops** runs with the width. On two-piece TFL surfaces, the woodgrain pattern will not be matched; two-piece HPL tops will have an acceptable match.

**Connections**

- Two-piece tops ship with flat brackets to connect tops at seams.
- Hardware ships with base to attach the base to the top.

**Related Products**

- Factory-installed grommets and cut-outs are available; upcharge applies.

➤Refer to assembly instructions.

### Planning Factors

IMPORTANT: Monitor mounts are specific to arm style and are not interchangeable between single and dual monitor applications.

Dual-monitor arms with cross bar can be used for a single-monitor application; however, the cross bar would be exposed.

Storage can be attached above or below the surface or extend from above to below the end of a bench.

Above-surface cabinets are available in 48" and 60" widths to correspond to the depth of benching applications; they are 12"D and 13¾"H. Select open cabinet or cabinet with a sliding door.

Undersurface cabinets are available in 48" and 60" widths to correspond to the depth of benching applications; they are 12"D and 13¾"H. Select open cabinet or cabinet with a sliding door.

End cabinets are available in 48" and 60" widths to correspond to the depth of benching applications; they are 12"D and 31½"H. They feature metal or glass shelves that can be removed to allow field installation of a TV or monitor.

Chassis: Laminate or wood
Doors: Resin (Glacier)
End cabinet shelves: painted metal or clear glass

Attachment brackets and hardware are included with cabinets to allow attachment to the end of the benching frame. Brackets and hardware do not deface the benching frame.

Storage extends beyond the benching frame and top. Consider the additional depth of the storage unit when layout out benching applications in floor plans. End cabinets can be mounted to match the top of 14" or 21" divider screens.
Framed, tackable fabric screens provide space division in benching applications. These framed screens are 1 3/8"D and available 14" or 21"H.

**Details**

**Framed, tackable fabric screens**

Side-to-side surface dividers are available in fabric, TFL, or HPL (markerboard). Dividers are available 22" or 28"D and 14" or 21"H. Surface dividers slide over the front or edge of the benching top, or any surface up to 1 3/8" thick, and is secured in place with two thumbscrews.

**Filler strips**

are available in 6", 12", and 24" widths, and may be used when tackable screens are specified in widths smaller than the benching application to create an opening between the screens.

**Finishes & Materials**

- Screens: painted frame surround with panel fabric on both sides (railroaded)
- Filler strips: painted metal
- Laminate surface dividers: TFL or HPL (markerboard)
- Fabric surface dividers: hardboard and fiberglass core with panel fabric on both sides

➤ See page 7.94 for fabric selection.

**Connections**

Thumbscrews on side-to-side surface dividers extend 3/4" below the KORE top.

**Planning Factors**

Framed, tackable fabric screens are designed to span the width of the structure up to 72"W or can be specified 12" shorter than the top to create an opening in the center for impromptu meetings or consulting. Use a filler strip to fill the opening between screens when specifying the screen shorter than the surface.

Screens can also be centered on each frame, creating a 6" or 12" opening on each end and a 12" or 24" opening between screens that is filled with a filler strip.

- Power in-feeds
- Power distribution blocks
- Jumpers
- Receptacles

**4-Trac Multi-Circuit:**

This low profile, non-sequential, 15-amp (2 circuits) or 20-amp (1 circuit), daisy chain system for benching applications provides 4 wires, and powers up to 12 duplex receptacles per circuit. All electrical components are UL listed, with the exception of the 20-amp power in-feed with plug which is UL recognized.

Power kits are installed facing downward, allowing it to be accessed from both sides.

Up to twelve tables can be linked together.

System is comprised of:
- Power in-feeds*
- Single-sided modular power kits that include two duplex receptacles and harness
- Table-to-table jumper

* Rotating power in-feed with quick disconnect, hardwire and hardwire for NYC in-feed models are also available.

IMPORTANT: Installation and use of electrical systems, the number or receptacles used on a given circuit, and connections to the building power supply should be in compliance with all local and national codes. Verify code requirements before ordering.
Specify bench top one or two inches shorter in depth to allow cords to drop behind the surface and plug in below.

Specify bench top with a factory-installed grommet to allow electronics to be plugged in directly to duplex receptacles below the bench top when using full-depth tops.

Specify a factory-installed cut-out in bench top and a power/data center separately to provide power above the surface. 3-prong plug plugs directly into a receptacle below the top.

IMPORTANT: Installation and use of electrical systems, the number or receptacles used on a given circuit, and connections to the building power supply should be in compliance with all local and national codes. Verify code requirements before ordering.

Dual-sided double distribution block provides for two receptacles, four outlets, per side.

Table-to-table jumper connects power kits, jumping power from one bench to the next.

Power and data cabling can be routed through the cable management channel that is part of the mid-leg extension assembly.
8-Wire Power System

continued

8-wire power system for KORE benching offers three power entry options:
- 8-wire floor power entry
- Circuit 1-only power entry
- New York power entry

8-wire floor power entry is 6’ long. Connection is made by snapping into the end of a power kit.

Circuit-1-only power entry is 10’ long and can be a quick solution for a maximum of 12 receptacles.

New York power entry allows hardwiring to comply with local codes.

Dual-sided double distribution blocks include mounting brackets that attach to the underside of the framed screen, centering the distribution blocks on the bench.

Jumpers connect dual-sided double distribution blocks in multi-person bench layouts.

Duplex receptacles are rated at 15 or 20 amps; 20-amp receptacles are required for some large equipment and have a keyed-slot on the hot side of the receptacle. Duplex receptacles are available in black or white; designated circuit models have a Δ imprinted on them.

Universal series bus (USB) powered receptacles are a 2-amp, circuit-1-only. Each receptacle provides two powered USB ports to charge/power peripheral devices.

Hardwire box allows hardwiring of power to comply with local codes. Choose the hardwire box that fits the application, either above or below surface. Hardwire boxes allow one receptacle per box.

Electrical management system can be added to meet the compliant criteria of ASHRAE 90.1-2010 and California Title 24. The system consists of:
- Monitor control device (MCD)
- Sensor that signals the MCD to shut off the power when no activity is present.

MCD must be installed by a licensed electrician between the building power and the power entry. MCD mounts to underside of the worksurface. This system can also be used with Xsite, Cetra, and Interworks 8-wire applications.

For jumping power between benches, select the appropriate jumper:

8-Wire Power System

3 and 1 (8-wire):

- Circuits 1, 2, and 3 share a neutral and common ground, providing circuits for general electrical needs. Customarily, one or more of the circuits are reserved for lighting or other everyday uses, which allows control by central or master switching.

2 and 2 (8-wire):

- Circuits 1 and 2 provide a pair of designated circuits for general electrical needs.

Circuits 3 and 4 provide a pair of designated circuits for computer applications.

**4-Trac® Multi-Circuit Power System Overview**

For Benching Applications

**Determining Circuit Usage:**
The decision to specify circuit-1 only or to use circuit 1 and 2 together is based on how many tables you wish to power.

**Circuit 1 only:**
- Utilizes circuit 1 power kits
- Can power up to 6 tables maximum off of one power in-feed
- Provides two duplex receptacles to each table for a total of 12 duplex receptacles per run
- Can be powered with 15-amp hardwire (standard or NYC model), rotating 15-amp hardwire, or 20-amp plug-in power in-feed

**Circuits 1 and 2:**
- Accommodates a combination of circuit 1 and 2 modular power kits
- Can power 7 or more tables (maximum of 12) off of one power in-feed
- Provides two duplex receptacles to each table for a total of 12 duplex receptacles per run
- Can be powered with 15-amp hardwire (standard or NYC model) or rotating 15-amp hardwire.
- Cannot be powered with 20-amp plug-in power infeed
- Circuits 1 and 2 can alternate table to table or they can be in succession (see diagram at left) since the system is non-sequential and will automatically connect to the correct circuit

**Specify bench top** one or two inches shorter in depth to allow cords to drop behind the surface and plug in below.

**Specify bench top with a factory-installed grommet** to allow electronics to be plugged in directly to duplex receptacles below the bench top when using full-depth tops.

**Specify a factory-installed cut-out in bench top and a power/data center separately** to provide power above the surface. 3-prong plug plugs directly into a receptacle below the top.

**IMPORTANT:** Installation and use of electrical systems, the number or receptacles used on a given circuit, and connections to the building power supply should be in compliance with all local and national codes. Verify code requirements before ordering.

**Details**

Low profile, non-sequential, 15-amp daisychain system provides 4 wires and 2-circuits. Utilizing a single power in-feed, the system powers up to 12 duplex receptacles per circuit or up to 24 duplex receptacles when using both circuits.

Three types of 15-amp power in-feeds are available to bring power from a wall or floor-mounted power box:
- Hardwire
- Hardwire for NYC/San Francisco
- Rotating with quick disconnect

Determine your need based on the available power source and local electrical codes. There are no restrictions in connection sequence.

IMPORTANT: All power in-feeds require installation by a licensed electrician.

Rotating 15-amp power in-feed is available to replace an existing wall outlet. Allows quick disconnect from wall outlet. A 72"L jumper, specified separately, connects the rotating power in-feed to a modular power kit. Jumper is encased in black liquid-tight conduit.

20-amp power in-feed with plug is available. Modular end connects to modular power kit.

IMPORTANT: The 20-amp power in-feed limits the system to a single circuit only and accommodates a maximum of 12 duplex receptacles; all modular power kits in the series must be Circuit 1. This infeed will not plug into a 15-amp power outlet.

Hardwire 15-amp power in-feeds feature black, liquid-tight conduit (standard model) or metal conduit (NYC model). Modular end connects to modular power kit.

**Modular power kits** contain:
- Two 15-amp duplex receptacles
- Modular power kit is centered under the framed screen on the bench.

40", 52, and 64"L jumpers are available to extend power between modular power kits on adjoining tables. Jumper is encased in black liquid-tight conduit.

All parts are UL 183 listed, with the exception of the 20-amp power in-feed with plug which is UL recognized.

**Planning Factors**

4-Trac power in-feeds attach at the start of the power run.

Specify the appropriate cut-out size for corded units to install in the top and plug into the duplex outlet underneath the top to bring power to the surface.

➤ See page 7.42.

Specify tops with G1 or G19 grommets to allow desk top electronics to be plugged in under the surface. This is a lower cost alternative and practical for more permanent or semi-permanent configurations, such as teaming environments.

➤ See page 7.23.

Corded Power Components
For Benching Applications

**Bench tops** can be full depth when surface-mount power/USB modules are utilized. Alternatively, tops can be 1” or 2” shorter in depth allowing power strip to be utilized in the cable management tray.

**A variety of cut-out options** are available for bench tops, allowing users a variety of power/data components from which to select. ➤See page 7.51 for cut-out options.

**Cable management trays** attach to bench frame, allowing cords to be dropped behind the surface. Bottom of tray is 4½” below the surface (23½” off the floor).

**Power/data centers** are specified separately.

**Power and data cabling** can be routed through the cable management channel that is part of the mid-leg extension assembly.

**IMPORTANT**: Woodgrain laminate is a commercially compatible match to the wood finish of the same name and designator with consideration for the most common application—laminate surfaces on a wood chassis. When laminate and wood are mixed in other applications, the flip that occurs naturally in veneer may influence the overall match from piece to piece.

Customer-specified laminate is available on:
