Dual Benches

Overview

Dual bench models include a dual-sided height-adjustable base and two worksurfaces. Benches support a maximum weight of 265 lbs. per worksurface.

Worksurface is available in TFL, HPL, or wood veneer, and is 1½" thick. Rim is 3mm vinyl or veneer edge band.

Each worksurface has its own lift columns and central control box for synchronization.

Two height range options are available:
- Standard-height models adjust from 26"–42¼"
- Extended-height models adjust from 22½"–48½"

Both standard-height and extended-height models are available in all three dual bench power types listed at right.

Crossrails span between height-adjustable legs and supports power/data trays.

Center-mount fixed screens and end screens can be specified separately for all dual-bench models.

Privacy worksurface screens are available for standard-height models only.

Up/down switch (one per side) is standard; programmable control switch is available separately.

Several safety features are standard:
- Anti-collision function on control box will engage when a firm obstruction is detected and will stop worksurface travel.
- Overheat protection will stop the unit should the motor overheat due to being heavily load or if driven continuously. Operation of the desk can resume in approximately 15 minutes.
- Overload protection detects if the load is too heavy and will stop the unit. Remove the load and resume use.
- Control box includes a 9' power cord with two-prong plug.

Basic Power
- Power/data tray for use with 8-wire power system
- Not available on 48" and 54" widths

Expanded Power
- Power/data tray for use with 8-wire power system
- Accommodates 4 duplex receptacles per side
- Not available on 48" and 54" widths

Chicago Power
- Power/data tray
- 4 hardwire boxes (two per side)

IMPORTANT: Xsede benches are UL 1286 listed as furniture systems. Electrical components attached to the bench are UL 962 listed.
**Dual Benches**

**Dimensions**

**Travel Range:**
Dual bench heights include the worksurface thickness. Each worksurface works independently of the adjoining or facing bench.

**Bench Depth:**
Bench structure depth is specific to 23" and 29"H depth worksurfaces. The worksurfaces will be centered on each side of the base structure, maintaining a 53/8" gap between the back of the worksurface for both 23" and 29"D models.

➤ See below for gap dimensions.

**Gap Between Worksurfaces and Screens:**

- **Privacy screens mounted flush to the back of the worksurface** will have a 3" gap between the screens. Available for standard-height benches only.

- **Privacy screens mounted with a 1" gap between worksurface to manage cables** will have a 1" gap between screens. Available for standard-height benches only. Worksurface must be mounted 1" away from the center to avoid interference with the understructure.

- **Benches with center-mount fixed screen** will have a 21/8" gap between the screen and the worksurface on each side.

Worksurface privacy screens can be mounted flush or with a 1" gap away from the worksurface.

Worksurfaces centered on the blade will have a 2 1/8" gap on each side of a center-mount screen for both 23" and 29"D worksurfaces.

**Overall Height with Privacy or Center Screens:**

Dimensions shown above apply to standard-height dual benches with screens

---

**Perks Trackless Keyboard Kit**

(model 99K1806KAT) can be installed on the user side of worksurfaces with a suggested clearance of 9 3/8" from the front of edge of the worksurface. The unit can be installed on clearances slightly less than 9 3/8", but will position the keyboard tray platform further away from the surface and reduce the undersurface storage area.  

➤ See the Perks chapter of the Kimball Desks & Accessories Price List.
Dual Benches

Product Information

Details

Dual bench models include a base and two worksurfaces.

Two height range options are available:
- Standard-height models adjust from 28\(\frac{1}{2}''\)–43''
- Extended-height models adjust from 22\(\frac{1}{2}''\)–48\(\frac{1}{2}''\)

Three power options:
- Basic power
- Expanded power
- Chicago power

➤ See pages 3.12–3.15.

Worksurfaces have square edges and are available in:
- 1\(\frac{1}{8}''\)-thick thermally fused laminate (TFL)
- 1\(\frac{3}{8}''\)-thick high-pressure laminate (HPL)
- 1\(\frac{3}{8}''\)-thick high-pressure laminate (HPL) with a wood rim
- 1\(\frac{3}{8}''\)-thick wood veneer

> See pages 3.12–3.15.

Grain direction runs with the width.

Factory-installed grommets and cut-outs are available in predetermined locations; upcharge applies.

➤ See pages 3.33–3.34.

Two standard up/down switch control boxes, one per side, ships standard with all dual benches. Allows a low position and a high position to be set to prevent desk from interfering with obstructions such as pedestals and overheads; this feature is not available on programmable switches.

Planners can specify separately to link benches together.

➤ See page 3.10 for application guidelines.

Connections

Ganging connectors can be specified separately to link benches together. They provide support for power in-feeds, jumpers, and cables that run in the recessed center area. Quantity of J-hooks varies with the length of the tray.

Glides are standard. Leveling range is ½''. If more leveling is required, a break in the bench run may be necessary.

Softened rim profile is featured for both vinyl rim (available on TFL and wood surfaces) and wood rim (available on HPL and wood surfaces).

For both clamp- or grommet/bolt-through Perks monitor arms, be careful to install so as not to interfere with the height-adjustable base frame, modesty panel, screen, or cut-outs that are attached to the worksurface.

J-hooks are standard in all bench power/data trays and ganging connectors. They provide support for power in-feeds, jumpers, and cables that run in the recessed center area. Quantity of J-hooks varies with the length of the tray.

Connections

Ganging connectors can be specified separately to link benches together. They provide support for power in-feeds, jumpers, and cables that run in the recessed center area. Quantity of J-hooks varies with the length of the tray.

Glides are standard. Leveling range is ½''. If more leveling is required, a break in the bench run may be necessary.

Softened rim profile is featured for both vinyl rim (available on TFL and HPL surfaces) and wood rim (available on HPL and wood surfaces).

For both clamp- or grommet/bolt-through Perks monitor arms, be careful to install so as not to interfere with the height-adjustable base frame, modesty panel, screen, or cut-outs that are attached to the worksurface.

Related Products

Plastic cable carrier guides cords and cables from the worksurface to the power tray, preventing kinks in the cables as the worksurface moves. The top screws to the underside of the worksurface and can lay in the power/data tray or be secured with provided high-strength magnets. The carrier features ½'' x ½'' openings on the inside to slip cords into; each opening accommodates one ¼'' cord and one data cable per side. Links in the carrier can be removed to adjust to the desired length. Carrier can also be installed using the magnets to the column leg below the tray to manage cables from the power data/tray to a floor or wall outlet. It will not accommodate the power in-feed for the 8-wire system.

Guidelines for cable management for benches, including the use of cable basket, Perks power outlet strips, and worksurface grommets, are the same as for freestanding desks.

➤ See the Height Adjust Desks chapter of the Kimball Benching and Height Adjust Price List.

Related Products

Perks monitor arms

➤ See the Perks chapter of the Kimball Desks & Accessories Price List.

Cable baskets secure power and data cables neatly to the underside of a worksurface. As bench worksurfaces are placed offset to the base, the area between the back of the surface to the understructure (frame) is less deep. Specify the narrower 45F14CBS for 48''W worksurfaces due to limited space. No restrictions apply on other worksurfaces.
Benches can be used singly with one frame providing a two-person workstation or several benches can be connected to form a dual-sided run.

45F13GCARP

Ganging connectors, specified separately, connect benches together. Ganging connector is screwed to the underside of the crossrails of both benches.

Gap between back-to-back worksurfaces accommodates screens and cords. If no screen is desired, a minimum 1" gap is still required for the safety of moving adjacent surfaces.

1" gap minimum between side-by-side worksurfaces is required to minimize pinch/clearance hazards.

Ganging connector is sized to provide the required 1" minimum clearance when worksurfaces are installed appropriately.
Details

End panels define the boundary between workstations and other open plan spaces. They provide an option for a clean appearance at the end of a bench frame and provide visual privacy for occupants.

End panels are available in three heights (28\(\frac{7}{8}\)“, 42\(\frac{1}{4}\)“, and 49\(\frac{1}{4}\)“H) to align with the center screen. They are available in two widths:
- 51\(\frac{3}{8}\)“W end panels for benches using 23”D worksurfaces
- 63\(\frac{3}{8}\)“W end panels for benches using 29”D worksurfaces.

Glides are standard and provide 1\(\frac{1}{2}\)“ of adjustment.

TFL or HPL end panels are particle board with laminate on both sides with 1/8” (3mm) vinyl edge banding at tops and side. Vinyl edge banding can be selected to match the laminate or in a contrasting color.

Wood end panels are particle board with veneer on both sides and an 1/8” (3mm) wood edge banding at tops and side. Banding and the veneer will be the same finish.

Grain direction runs horizontally on all end panels.

Connections

End panels attach to the underside of the crossrail of the bench frame. They can be attached on one or both ends of the bench. Worksurfaces align with end panels.

Planning Factors

End panels are for use at the end of a bench only. They cannot be used with ganging connectors.

End panels specified with privacy screens mounted with 1” gap from the back of the worksurface to manage cables will project past the end panel 7/8” on each side.

End panels are non-handed and can be used on either side of the bench.

Ceiling power/data pole and end panels cannot be used on the same end.

Set of two benches ganged together with end panels on both ends.
Basic power dual bench models provide an integrated power/data tray running through the center of the base to support an 8-wire power system; specified separately. Standard includes:

- One dual-sided, double distribution block
- Four voice/data openings (two per side)
- Two data adapter kits
- Four duplex receptacle openings (two per side)

Note: Base shown here without worksurfaces, which are standard with all bench models.

Accessory rail is standard. Center screens mount to the top of the accessory rail; electrical components attach below.

Integreted power/data tray attaches to the bottom side of the crossrails.

Up/down switch (one per side) is standard; programmable control switch is available separately.

Control box (one per side) is standard.

One dual-sided double distribution block is standard.

Four duplex receptacles (two per side), jumpers, and 8-wire power entry are specified separately.
Configuration at left includes:
- Two basic power dual benches
- One ganging connector
- Two center-mount fixed screens
- One power entry
- One jumper
- Eight duplex receptacles
- Four cable carriers
Expanded power dual bench models provide an integrated power/data tray running through the center of the base to support an 8-wire power system; specified separately. Standard includes:
- Two dual-sided, double distribution blocks with connecting harness
- Four voice/data openings (two per side)
- Two data adapter kits
- Eight duplex receptacle openings (four per side)

*Note: Base shown here without worksurfaces, which are standard with all bench models.*

Expanded power dual bench models are available in 60”, 66”, and 72”W models; not available in 48” and 54”W models.

Accessory rail is standard. Center screens mount to the top of the accessory rail; electrical components attach below.

Up/down switch (one per side) is standard; programmable control switch is available separately.

Control box (one per side) is standard.

Integrated power/data tray attaches to the bottom side of the crossrails.

Two dual-sided double distribution blocks with harness are standard.

Eight duplex receptacles (four per side), jumpers, and 8-wire power entry are specified separately.
Chicago power dual bench models provide an integrated power/data tray running through the center of the base that allows an electrician to hardwire electrical components to comply with local codes. Standard includes:

- Four hardwire boxes (two per side)
- Four voice/data openings (two per side)
- Two data adapter kits
- Four receptacle openings (two per side)

*Note: Base shown here without worksurfaces, which are standard with all bench models.*

**Accessory rail** is standard. Center screens mount to the top of the accessory rail; hardwire boxes attach below.

**Up/down switch** (one per side) is standard; programmable control switch is available separately.

**Control box** (one per side) is standard.

**Integrated power/data tray** attaches to the bottom side of the crossrails. Area below the accessory rail is open to allow hardwiring.

**Four hardwire boxes** that allow one receptacle per box...
Single Benches

Overview

Single bench models include one height-adjustable C-leg base and one worksurface. Single bench models support a maximum weight of 265 lbs. IMPORTANT: Single bench models are not freestanding. They require a back panel, specified separately, for stability.

Worksurface is available in TFL, HPL, or wood veneer, and is 13/16” thick. Rim is 3mm vinyl or veneer edge band.

Each worksurface has its own lift columns and central control box for synchronization.

Crossrail attaches to the C-legs on both sides and support the power/data tray and accessory rail. Required back panel attaches to crossrails.

Two height range options are available:
• Standard-height models adjust from 26"–42½”
• Extended-height models adjust from 22½”–48½”

Both standard-height and extended-height models are available in all three dual bench power types listed at right.

Back panels and end panels are available in three heights: 28¾”, 42¼”, and 49½”. Back panels and end panels are specified based on application. ➤See pages 3.19–3.20.

Center-mount fixed screens and end screens can be specified separately for all bench models.

Privacy screens are available for standard-height models only.

Up/down switch is standard; programmable control switch is available separately.

Several safety features are standard:
• Anti-collision function on control box will engage when a firm obstruction is detected and will stop worksurface travel.
• Overheat protection will stop the unit should the motor overheat due to being heavily load or if driven continuously. Operation of the desk can resume in approximately 15 minutes.
• Overload protection detects if the load is too heavy and will stop the unit. Remove the load and resume use.
• Control box includes a 9’ power cord with two-prong plug.

Xsede benches are UL 1286 listed as furniture systems. Electrical components attached to the bench are UL 962 listed.
**Single Benches**

**Dimensions**

Gap between back panel and the back edge of the worksurface is 4”.

29”D worksurface is positioned the same distance from the back edge of the bench frame as the 23”D worksurface; the additional 6” extends toward the user side (see dotted line above).

Privacy screens with frame can be mounted flush with the back of worksurface on standard-height single bench. When privacy screens are mounted with a 1” wire gap, the worksurface must be mounted 1” away from the power/data tray to avoid interference with the understructure.

They are not for use with extended-height models as they will collide with the power/data tray below.

Center screen can be mounted to the accessory rail for additional privacy. Consider the height selected for the back panel; center screens are unnecessary with higher back panels. 28 7/8”H back panel shown above.
Single Benches

Product Information

Details

**Single bench models** include a base and one worksurface.

**Two height range options** are available:
- Standard-height models adjust from 28½“–43”
- Extended-height models adjust from 22½“–48½”

**Three power options:**
- Basic power
- Expanded power
- Chicago power

**Worksurfaces** have square edges and are available in:
- 1 1/8”-thick thermally fused laminate (TFL)
- 1 3/16”-thick high-pressure laminate (HPL)
- 1 3/16”-thick high-pressure laminate (HPL) with a wood rim
- 1 3/16”-thick wood veneer

Grain direction runs with the width.

**Factory-installed grommets and cut-outs** are available in predetermined locations; upcharge applies.

J-hooks are standard in all bench power/data trays and ganging connectors. They provide support for power in-feeds, jumpers, and cables that run in the recessed center area. Quantity of J-hooks varies with the length of the tray.

Glides are standard. Leveling range is 1/4”. If more leveling is required, a break in the bench run may be necessary.

Connections

**Ganging connectors** can be specified separately to link benches together.

**Softened rim profile** is featured for both vinyl rim (available on TFL and HPL surfaces) and wood rim (available on HPL and wood surfaces)

**Planning Factors**

For both clamp- or grommet/bolt-through Perks monitor arms, be careful to install so as not to interfere with the height-adjustable base frame, modesty panel, screen, or cut-outs that are attached to the worksurface.

**Related Products**

Plastic cable carrier guides cords and cables from the worksurface to the power tray, preventing kinks in the cables as the worksurface moves. The top screws to the underside of the worksurface and can lay in the power/data tray or be secured with provided high-strength magnets. The carrier features 1/2” x 1/2” openings on the inside to slip cords into; each opening accommodates one 1/4” cord and one data cable per side. Links in the carrier can be removed to adjust to the desired length. Carrier can also be installed using the magnets to the column leg below the tray to manage cables from the power data/tray to a floor or wall outlet. It will not accommodate the power in-feed for the 8-wire system.

**Cable baskets** secure power and data cables neatly to the underside of a worksurface. As bench worksurfaces are placed offset to the base, the area between the back of the surface to the understructure (frame) is less deep. Specify the narrowest 45F14CBS for 48”W worksurfaces due to limited space. No restrictions apply on other worksurfaces.

**Guidelines for cable management for benches**, including the use of cable basket, Perks power outlet strips, and worksurface grommets, are the same as for freestanding desks.

**Related Products**

Perks monitor arms

**Perks hanging CPU holder** cannot be used with Xsede height adjust benches as it will interfere with the understructure.

When specifying storage, the maximum clearance under the height-adjustable bench frame to the floor is 22 3/8” for standard-height and 18 3/8” for extended-height models with the leveling glide in the lowest position.
Details

IMPORTANT: Single bench models are not freestanding. They require a back panel, specified separately, for stability.

Back panels are specified in the same width as the single bench. They are available in five widths (48", 54", 60", 66", and 72"W) and three heights (28\(\frac{7}{8}\)", 42\(\frac{1}{4}\)", and 49\(\frac{1}{4}\)"H).

End panels are optional. They must be attached to specific back panels and are handed per the application. Specify end panel height to match the height of the back panel and select the width to correspond to the worksurface depth. 28\(\frac{1}{4}\)"D end panel is used with 23"D worksurfaces, 34\(\frac{1}{4}\)"D end panel is used with 29"D worksurfaces.

Glides are standard on back panels and end panels to provide 1\(\frac{1}{2}\)" of adjustment.

TFL or HPL back and end panels are 1\(\frac{1}{16}\)"-thick particle board with laminate on both sides and 1/8"-thick (3mm) vinyl edge banding at the top and sides. Vinyl edge banding can be specified to match the laminate or in a contrasting color.

Wood back and end panels are 1\(\frac{3}{16}\)"-thick particle board with veneer on both sides and 1/8"-thick (3mm) wood edge banding at the top and sides. Banding and veneer will be the same.

Grain direction runs horizontally and will not match between wood/woodgrain laminate panels. The edge banding around each panel creates a grain separation.

Connections

Hardware to attach back panel to the frame's crossrail structure ship standard with the bench.

End panels ship with a bracket to connect to the end of a single bench. They are machined to attach to the adjoining back panel. End panels are not for use without a back panel or between worksurfaces in a run.

Ceiling power/data pole cannot be specified for use with an end panel.

Back panels ship with threaded inserts to accept attachment hardware that ships with the single bench. Back panels are machined to accept adjoining end or back panels. See page 00 for application Guidelines.
IMPORTANT: Back panels for single benches are not for use alone and are specified based on adjacent components.

To assist with specification, the guidelines on this page refer to back and end panels by the alpha portion of their model numbers.

**Ganging connector** for single benches (45F0713SSGCARP) is required to connect single benches to each other. The ganging connector is sized to maintain the required 1” minimum clearance when worksurfaces are installed appropriately.

**BPSSR back panels** feature a rim (finished edge) on the top; they are machined to accept:
- Right end panel (EPSSR) on right side, and
- Back panel (BPSSC or BPSSL) on the left side

**BPSSL back panels** feature a rim (finished edge) on the top; they are machined to accept:
- Left end panel (EPSSL) on left side, and
- Back panel (BPSSC or BPSSR) on the left side

**BPSBNR back panels** feature a rim (finished edge) on the right and top; they are machined to accept:
- Back panel (BPSSC or BPSBNL) on the left side

**BPSBNL back panels** feature a rim (finished edge) on the left and top; they are machined to accept:
- Back panel (BPSSC or BPSBNR) on the right side

**BPSSC back panels** feature a rim (finished edge) on the top; they are machined to accept:
- Back panels on both sides (BPSSC, BPSSR, BPSSL, BPSBNL, and/or BPSBNR)

To create longer runs, insert a bench with a BPSSC back panel in the middle of the run.

**BPSB back panels** feature a rim (finished edge) on the left, right, and top; do not accept attachment to other back or end panels. BPSB panels are for use on:
- Single stand-alone bench, or
- Single bench ganged to a dual bench

**BPSBNR back panels** feature a rim (finished edge) on the right and top; they are machined to accept:
- Back panel (BPSSC or BPSBNL) on the left side

**BPSBNL back panels** feature a rim (finished edge) on the left and top; they are machined to accept:
- Back panel (BPSSC or BPSBNR) on the right side

Cannot be used with end panel or other back panel models.
Basic power single bench models provide an integrated power/data tray running between the C-leg base structure to support an 8-wire power system; specified separately. Standard includes:
• One single-sided, double distribution block
• Two voice/data openings
• One data adapter kits
• Two duplex receptacle openings

Note: Base shown here without worksurfaces, which are standard with all bench models.

IMPORTANT: A back panel is required for stability (not shown) and must be specified separately.

Accessory rail is standard. Center screens mount to the top of the accessory rail; electrical components attach below.

Up/down switch (one per side) is standard; programmable control switch is available separately.

Control box (one per side) is standard.

Integrated power/data tray attaches to the bottom side of the crossrails.

One single-sided double distribution block is standard.

Two duplex receptacles, jumpers, and 8-wire power entry are specified separately.
Expanded power single bench models provide an integrated power/data tray running between the C-leg base structure to support an 8-wire power system; specified separately. Standard includes:
- Two single-sided, double distribution blocks with harness
- Two voice/data openings
- One data adapter kits
- Four duplex receptacle openings

Note: Base shown here without worksurfaces, which are standard with all bench models.

IMPORTANT: A back panel is required for stability (not shown) and must be specified separately.

Accessory rail is standard. Center screens mount to the top of the accessory rail; electrical components attach bellow.

Up/down switch (one per side) is standard; programmable control switch is available separately.

Control box (one per side) is standard.

Integrated power/data tray attaches to the bottom side of the crossrails.

Two single-sided double distribution blocks with harness are standard.

Four duplex receptacles, jumpers, and 8-wire power entry are specified separately.
Chicago power single bench models provide an integrated power/data tray running through the center of the base that allows an electrician to hardwire electrical components to comply with local codes; specified separately. Standard includes:

- Two hardwire boxes
- Two voice/data openings
- One data adapter kits
- Two duplex receptacle openings

Note: Base shown here without worksurfaces, which are standard with all bench models.

Accessory rail is standard. Center screens mount to the top of the accessory rail; electrical components attach bellow.

Up/down switch (one per side) is standard; programmable control switch is available separately.

Control box (one per side) is standard

Integrated power/data tray attaches to the bottom side of the crossrails. Area below the accessory rail is open to allow hardwiring; the tray is open for lay-in cable routing.

Two hardwire boxes that allow one receptacle per box...
Privacy Screens

For Dual and Single Benches

Details

Privacy screens attach to the select benching worksurfaces to provide space division and privacy. Privacy screens feature a tackable fabric surface with an aluminum frame which is available in all paint colors. Attachment brackets are painted to match the frame.

12” or 21” above
6 1/4” below

Fabric privacy screens are designed to provide desktop privacy that travels with the surface. Two heights are available: 12” and 21” (above the worksurface). 6 1/2” will fall below the worksurface, making overall screen heights of 20” and 29”, respectively. They can be used with standard-height dual and single benches only.

Side privacy screens with frame mount to the end of a worksurface to provide side-to-side privacy. They can be used alone or with privacy screens to create the highest level of privacy when dividing space. Side privacy screens are available in tackable fabric or marker-board and have an aluminum frame that is available in all paint colors. Metal attachment sleeve will feature the same paint as the frame. When mounted to the worksurface, the screen will align to the same height as the privacy screen at 12” or 21”. Two depths are available. Side privacy screens do not hang below the surface. They can be used on all bench models.

Models with accessory rail on the user side are available. They accept Canopy screen rail accessories. The rail runs the width of the screen and is located 4” from the top of the screen and is 1/2”H. Accessory rail is painted to match the frame and attachment brackets.

Six Canopy screen accessory rail accessories are available for use on Xsede screens. They are available in all paint colors to accent the workspace. See the Canopy chapter in the Kimball Benching Price List.

Planning Factors

IMPORTANT: Privacy screens are prohibited on extended-height dual and single benches, as they will interfere with the power/data tray and crossrails.

Privacy screens can be specified to span the full width or they can be narrower (shown) than the worksurface. A center cut-out or grommet is recommended on the narrower application to avoid interference with the screen’s mounting brackets.

Due to limited space, specify cable basket 45F14CBS to fit between the screen’s mounting brackets when a 48”W screen is mounted on a bench with 23” or 29”D worksurfaces.

When clamp-mount monitor arm is used on a surface with privacy screens, the screens must be mounted with a 1” minimum gap away from the worksurface to accommodate the monitor arm’s mounting assembly.
Center-Mount Fixed Screens
For Dual and Single Benches

Details

Center-mount fixed screens are designed for use with dual and single benches. They feature the same design as privacy screens with a tackable panel fabric surface with an aluminum frame available in all paint colors.

Attachments brackets are included and will match the screen frame color.

Planning Factors

Side privacy screens mounted to the bench worksurface can be used with a center-mount fixed screen. Side screens move up and down with the worksurface. The center fixed screen remains stationary.

 Screens can be specified in the same width as the bench for maximum privacy.

 Screens can be specified in a narrower width than the bench for more open space.

Related Products

Bench with center-mount fixed screen can be used with clamp-mount and grommet/bolt-through monitor arms. *See the Perks chapter of the Kimball Desks & Accessories Price List.*
Perks® Solutions for Now Privacy Screens
For Dual and Single Benches

Details

24”, 30” and 40”H edge-mount privacy screens are resin. Applicable to standard-height bench only; cannot be used on extended-height benches. Must specify 6” narrower than the worksurface.

27”H clamp-mount privacy screens are available in TFL or resin. Applicable to standard and extended-height benches. Widths are sized for height-adjust model widths or they may be specified narrower than the worksurface.

27”H full edge-mount privacy screens are available in resin or glass. Applicable to standard and extended-height benches. Widths are sized for height-adjust model widths or they may be specified narrower than the worksurface.

Side privacy screens are available for use on outside bench ends only. Cannot be used between benches.

➤ See the Kimball Solutions for Now Price List for details.
Perks® Monitor Arms

For Dual and Single Benches

Arm with integrated cable management reach is 20" on single and dual independent models; 22" on dual crossbar models. Height adjustment range is 12" on single and dual independent models; and 11 1/2" on dual crossbar models.

Monitors up to 15 1/2 lbs. can be accommodated:
- Single model supports one monitor between 5–15 1/2 lbs.
- Dual independent model supports two monitors between 5–15 1/2 lbs. each. Each arm adjusts independently of the other for the greatest versatility.
- Dual crossbar model supports two monitors up to 12 1/2 lbs. each. Note: Dual-arm crossbar monitors must have two monitors attached at all times for balance.

100mm x 100mm VESA plates are standard. A 75mm x 75mm plate can be accommodated. The standard VESA plates are not compatible with Apple monitors.

> See the Perks chapter of the Kimball Desks & Accessories Price List to specify.

Details

Single

Dual Independent (Monitors move independently)

Dual Crossbar (Monitors move together)

Connections

Clamp

Grommet/Bolt-Through

Single monitor arms are available in clamp-mount (99KSMAM2CMS) and grommet/bolt-through (99KSMAM2GMS) models.

Clamp

Grommet/Bolt-Through

Dual crossbar monitor arms are available in clamp-mount (99KSMACBMBCMS) and grommet/bolt-through (99KSMACBMBGMS) models.

Clamp

Dual independent monitor arms are available as a clamp-mount model only (99KMF2DACM12S).

Planning Factors

IMPORTANT: Monitor mounts are specific to arm style and are not interchangeable between single and dual monitor applications.

For clamp- or grommet/bolt-through models, be careful to install so as not to interfere with the height-adjustable base frame, modesty panel, screen, or cut-outs that are attached to the worksurface.

Bench with center-mount fixed screen can be used with clamp-mount and grommet/bolt-through models.

When privacy screens are used on a bench of freestanding desk with a clamp-mount model, the screens must be mounted with a 1" minimum gap away from the worksurface to accommodate the monitor arm's mounting assembly.

> Refer to assembly instructions.
8-Wire Power Components

For Basic and Expanded Power on Dual and Single Benches

Details

8-wire power system offers two power entry solutions:
• 8-wire floor power entry
• Circuit-1-only floor or wall entry

8-wire, 4-circuit (3+1 or 2+2) floor power entry accommodates 15-amp or 20-amp duplex receptacles. They are available in 6’ and 12’ long models.

Circuit-1-only power entry is 10’ long and can be a quick solution for a maximum of 12 duplex receptacles. This power entry includes a 20-amp plug which must plug into a 20-amp building outlet; for use with circuit 1 15- or 20-amp receptacles only. Connection is made by snapping into the end of the distribution block.

New York power entry allows hard-wiring to comply with local codes.

IMPORTANT: The building’s power capability should be determined before power is configured and components specified.

IMPORTANT: Planning actual power supplies and branch circuits, as well as installation, must be performed by qualified electricians or electrical engineers.

Data Adapter Kit Reference:
Kit provides adapter for a variety of manufacturer’s jacks and couplers and two solid blanks. Jacks and cables are not included. Select black or white plastic.

Manufacturer Adapter*
Systimax/CommScope AA
Uniprise/CommScope AA
L-Com Keystone Modular BB
Tyco SL and 100 Connect Series Modular BB
Siemon Keystone Style BB
Allen Tel Versa Tap Series BB
Leviton Quick Port® Series BB
Nordx Keystone Style BB
Tyco SL Coupler Series CC
Krone 6000 Series/ADC CC
Hubbell Xcelerator™ Keystone Series CC
Blank (no coupler/jack) DD
Ortronics TracJack Series EE
Panduit Mini-Com Series FF
Microphone Jack/3-pin XLR, solder type only GG
Video Monitor Jack/DB-15, panel-mount solder style HH

*Adapter identifier is located on the backside of the plate.

One dual-sided, double distribution block comes standard with each basic power dual bench; two are standard on expanded power dual benches.

One single-sided, double distribution block comes standard with each basic power single bench; two are standard on expanded power single benches.

Receptacles are specified separately and snap into the block. Available in black and white.

Universal serial bus (USB) powered receptacles are 2-amp, circuit-1-only. They can be used anywhere a circuit-1-only receptacle is used. Each receptacle provides two powered USB ports to provide charging/power capabilities for peripheral devices.

Statement of Line ➤See page 3.3
Planning 3.6
Pricing 3.35
Surface Materials 3.72

Jumpers connect dual-sided double distribution boxes in bench-to-bench or beam-to-beam applications.

Basic Power
For same-width benches
48” + 48” 45F40EJB8
54” + 54” 45F46EJB8
60” + 60” 45F52EJB8
66” + 66” 45F58EJB8
72” + 72” 45F64EJB8

Expanded Power
For same-width benches
60” + 60” 45F28EJB8
66” + 66” 45F28EJB8
72” + 72” 45F28EJB8

Note: Not available in 48” and 54” widths.

15-amp 20-amp

Duplex receptacles are rated at 15 or 20 amps. 20-amp models are required for some large equipment applications and have a keyed-slot on the Hot side of the receptacle. Duplex receptacles are available in black or white and the designated/dedicated models have a Δ imprinted on them for use as a visual aid.

Number of Receptacles

Basic Power
Dual Bench 4 (2 per side)
Single Bench 2

Expanded Power
Dual Bench 8 (4 per side)
Single Bench 4

Universal serial bus (USB) powered receptacles are 2-amp, circuit-1-only. They can be used anywhere a circuit-1-only receptacle is used. Each receptacle provides two powered USB ports to provide charging/power capabilities for peripheral devices.
8-wire power entry allows power to enter from the floor, ceiling, wall, or column. Power can be distributed either above or below worksurfaces. If power is required above and below, two separate power entries are required. 8-wire systems accommodate up to 13 duplex receptacles per circuit and include four 12-gauge hot wires, one 12-gauge neutral wire, one 10-gauge shared neutral wire, and two 12-gauge ground wires.

Xsede's electrical system is rated for 20-amp service. To support the usage, 15-amp convenience receptacles can be placed anywhere along the leg of the electrical connection. In the event that an appliance, such as a larger printer/copier/plotter needs to have a 20-amp receptacle, it is recommended to use a dedicated circuit with a 20-amp receptacle. Using 15-amp convenience receptacles will aid in ensuring that no one leg of the system can pull too much current, which could potentially cause the system to trip out and lose power across the entire system.

**Circuit Configurations and Wiring Diagrams**

### 3 and 1 (8-Wire) Configuration:

**Circuit 4** consists of three separate conductors (hot, neutral, and ground) and meets the BIFMA/ANSI definition for a dedicated circuit.

15-amp | 20-amp
---|---
1 45FER1815 | 45FER1820
2 45FER2815 | 45FER2820
3 45FER3815 | 45FER3820
4 45FER4D815 | 45FER4D820

**Circuits 1, 2, and 3** share a neutral and common ground, providing circuits for general electrical needs. Customarily, one or more of the circuits are reserved for lighting or other everyday uses, which allows control by central or master switching.

**Circuits 3 and 4** provide a pair of designated circuits for computer applications.

15-amp | 20-amp
---|---
1* 45FER1815 | 45FER1820
2 45FER2815 | 45FER2820
3 45FER3D815 | 45FER3D820
4 45FER4D815 | 45FER4D820

* 45FERUP (powered USB receptacle) can be used in place of circuit 1 tray receptacles

### IMPORTANT:

Planning actual power supplies and branch circuits must be performed by qualified electricians or electrical engineers familiar with the National Electrical Code and the appropriate local codes. The information provided here is intended to assist specifiers.

**IMPORTANT:** Xsede electrical components are UL listed under the Xsede name and are not interchangeable with other Kimball series.
**Power Entry Covers**

For Dual and Single Benches

---

**Details**

**Power in-feed channel cover**
routes power and data cables into the bench from the floor. It is non-structural and mounts into the open, underside of the power/data tray. It can mount on either side of the power distribution block.

**Removable cap on the power in-feed channel cover**
allows access to the interior of the channel to route conduit and cords. It is shorter than the leg to provide power/cable openings at the top and bottom. It snaps and slides into the desired position. An interior divider separates power and data.

**Ceiling power/data pole cover**
mounts to the end of a bench. The power in-feed exits the pole under the mounting bracket to connect to the distribution block. Cannot be used with end panels.

---

**Ceiling power/data pole cover**
routes the 12' power entry and data/voice cables from the ceiling to all bench models. Maximum ceiling height is 10'. Power pole features a moveable divider inside that can create a physical separation between power and data.
Lower Cable Covers
For Dual and Single Benches

Details

Optional lower cable covers provide additional coverage of power and data cable connections that run on the underside of bench frames. Models are specific to dual and single benches, and are specified in the same width as the bench.

2¼" open reveal runs the length of the cover when installed and allows cables to exit to the power source at any location.

Compatible with back and end panels.

For use on basic and expanded power benches; not for use on Chicago power models.

Lower cable covers attach after power and data are installed to the underside of the crossrail and span the width of the power/data tray.

Cable covers for use with ganging connectors are available to provide continuous coverage between benches.

Left and right lower cable covers are available for single bench to hide cables between the leg and the end panel. Left and right are determined from the user's side (back side shown).

Single bench lower cable cover can be used alone or with right or left end panel trims as shown.
Xsede Height Adjust provides several flexible options for routing and concealing cords and cables. These include:

- Factory-installed worksurface grommet options (G1 and G19)
- Factory-installed cut-outs for power/data centers (C4, C6, G20, G28, and C29)

Factory-installed grommets and cut-outs are available in predetermined locations. See pages 3.33 and 3.34.

G1 plastic grommet is a two-piece unit with snap-in lid. Lid cut-out slides open to route cables or can be closed when not in use. Available in:
- SL Silver
- MB Matte Black

G19 metal grommet is a two-piece unit with black brush access. Top locks in place. Powdercoat finish in the following colors:
- 405 Designer White
- 501 Platinum Metallic
- 514 Carbon Metallic
- 490 Chrome
- 487 Brushed Nickel
- 544 Silver Pearl

C4 cut-outs are for use with:
- Mho® retractable power/data center with 3 prong plug (KCEB2PDPSPC)
- Mho retractable power/data/USB center with 3 prong plug (KCEB2PDUPSPC)

C6 cut-outs are for use with:
- Node® power center (KCEBN20PP)
- Node® power/USB center (KCEBN11PU)

G20 cut-outs are designed for use with Ellora® power/data center (99KPDCAM).

G28 cut-outs are designed for use with Ellora® power/USB/data center (45APDCS).

C29 cut-outs are designed for use with Ashley Trio™ power/USB center (KCE0409ATSMWW).

Undersurface-mount power units are available. See page 3.71.

Above-surface clamp-mount power units are available. See page 3.70.

IMPORTANT: All power/data centers must be specified separately for field installation.

* When you specify a grommet option on a dual bench, you will receive the two of same grommet(s), one on each side of the bench.

## Available Finishes

**G1 Grommets:**
- MB Matte Black
- SL Silver

**G19 Grommets:**
- 405 Designer White
- 487 Brushed Nickel
- 490 Chrome
- 501 Platinum Metallic
- 514 Carbon Metallic
- 544 Silver Pearl

➤ See page 3.32 for complete description of G1 and G19 grommets.

## How to Specify

1. Insert the location and finish designator into model number sequence as indicated on the pricing page.

Note: Specify grommet location and finish together in one step without a space between the location and the finish designators. For example:
- **G1LMB** = G1 grommet, left, matte black
- **G19R501** = G19 grommet, right, platinum metallic

IMPORTANT: Only the grommet locations shown in the matrix at left with a designator and price are available as standard.
## Factory-Installed Cut-Outs

<td>C29C</td>
<td>+$166</td>
</tr>
</tbody>
</table>

* When you specify a cut-out option on a dual bench, you will receive the two of same cut-out, one on each side of the bench.

Note: Single bench with 23"D rectangular worksurface is limited to C29C cutout because the understructure placement limits space.

---

**Related Products**

➤ See pages 3.66 to 3.68 for applicable power and data components; specified separately.

**How to Specify**

1. Insert the location designator into model number sequence as indicated on the pricing page.

   IMPORTANT: Only the cut-out locations shown in the matrix at left with a designator are available as standard.

---

### Standard Includes
- Bench frame
- One worksurface
- One electric height-adjustable mechanism with control box
- One standard up/down control switch
- One 9’ power cord
- Power/data tray with accessory rail and internal wire management clips
- Single-sided electrical distribution block
- One data plate adapter kit
- Hardware to attach back panel

### How to Specify

#### Bench

1. **Model**
2. **Worksurface material:**
   - **LL** = TFL with P rim
   - **L** = HPL with P rim
   - **LW** = HPL with F wood rim
   - **W** = Wood with F wood rim
3. **Rim profile:**
   - **P** = Softened vinyl (LL or L)
   - **F** = Softened wood (LW or W)
4. **Grommet/cut-out option:**
   - See pages 3.33 and 3.34.
   - **X** = No grommet or cut-out
5. **Worksurface finish price group (omit for LL models):**
   - **STD** = Group 1
   - **STD2** = Group 2 (+20%)
6. **Rim finish price group (omit for LL, L, and W models):**
   - **STD** = Group 1
   - **STD2** = Group 2 (+20%)
7. **Paint designator:**
   - **462** = Cinder
   - **405** = Designer White
   - **501** = Platinum Metallic
   - See page 3.74 for additional paint colors (+$592)
8. **Data adapter kit color:**
   - **B** = Black
   - **W** = White

### How to Specify

1. **Model**
2. **Material:**
   - **LL** = TFL
   - **L** = HPL
   - **W** = Wood
3. Rim finish designator (omit for W models)
4. Finish price group (omit for LL models):
   - **STD** = Group 1
   - **STD2** = Group 2 (+20%)
5. Finish designator
6. Bracket paint designator

**IMPORTANT:** End panels are not for use alone; must be used in conjunction with a back panel.

**Importance:**

Back panel is required for all single benches. They are specified based on attachment of another back panel or end panel. The ends of models on this page are machined to accept:

- Back panels on both sides (BPSSC, BPSSR, BPSSL, BPSBNL, and/or BPSBNR)

Attachment hardware ships with the bench.

Power In-feed Data Channel Cover and Ceiling Power/Data Pole Cover
➤See page 3.62.

Receptacles
➤See page 3.65.
8-Wire Power System Components
For Use with Dual and Single Benches

Standard Includes
- Duplex Receptacle: One duplex receptacle; injection-molded, vinyl-free plastic in Cinder or Designer White
- Note: Cinder receptacles feature white lettering and dedicated circuit markings as applicable. Designer White receptacles feature black lettering for dedicated circuit markings as applicable.

USB Receptacle
- One plate with two openings

USB Passive Cable
- Connects two devices: blue only

How to Specify

### How to Specify

1. **Model**

### Mho Power/Data Center

- 10' cord with 15-amp straight, three-prong plug
- Two 15-amp receptacles
- Two blank data ports that can accommodate one of eight provided adapter plates
- Anodized aluminum body: clear finish
- Pop-up lid that sits flush with surface when closed

### Mho Power/Data/USB Center

- 10' cord with 15-amp straight, three-prong plug
- Two 15-amp receptacles
- One blank data port that can accommodate one of eight provided adapter plates
- One port with two USB charging outlets
- Anodized aluminum body: clear finish
- Pop-up lid that sits flush with surface when closed

### Ashley Trio

- Three receptacles
- Two USB ports
- One open port for HAIM, RJ45, or VEGA
- Data plate adapter kit
- Housing: white
- Bezel: white
- 6'L white cord
### Pull-Up Power/USB Grommet

- Four receptacles
- Two USB ports
- Overcurrent and voltage protection
- 10' black cord
- Finger-pull access
- Black housing

Customer-specified laminate (CSL) applies to All HPL surfaces.

See the Surface Materials Reference Guide at www.kimball.com for a complete overview of the Kimball materials program, including:
- Characteristics of wood
- Special wood finishes
- Customer-specified laminate (CSL)
- Customer-specified paint (CSP)
- Fabric application and colorways
- Customer's own material (COM)
- Overview
- Alliance program
- TB133 process

Customer-specified laminate (CSL) is available for HPL surfaces.

See the Surface Materials Reference Guide at www.kimball.com for a complete overview of the Kimball materials program, including:
• Characteristics of wood
• Special wood finishes
• Customer-specified laminate (CSL)
• Customer-specified paint (CSP)
• Fabric application and colorways
• Customer's own material (COM) overview
• Alliance program
• TB133 process

IMPORTANT: Due to the reflective qualities of metallic paint, variations in color may occur.

</table>

**How to Use this Table**

1. Locate the model number
2. Select yardage from the appropriate column.

If COM fabric is to be “railroaded,” contact Customer Care for yardage requirements.

See the Kimball Surface Materials Reference Guide at www.kimball.com for COM policy and additional information.
